

Finance Buddy

Brief for the portfolio website · "What I Built" update

For: the Claude Code session that works on Sam's existing portfolio website. Prepared by Sam (product designer).

Important: do not create a new website. Work only inside the existing portfolio site. In the **"What I Built"** section there are three projects. Replace the **third project, "To Do List"**, with **Finance Buddy**, change its logo to the Finance Buddy mascot, and add a Finance Buddy landing page inside the same site. Leave everything else as it is.

1. What to do

1. **Update the third card in "What I Built"**. Replace "To Do List" with Finance Buddy: title, short description, tags, link and logo (copy in section 6). The other two cards stay exactly the same.
2. **Add a Finance Buddy landing page inside the existing site**. Follow the site's existing routing and page pattern (if other projects have pages, copy that structure; otherwise use `/projects/finance-buddy`). The third card links to it. Use the site's existing header, footer and components.
3. **Style the page in Finance Buddy's look** (section 7), so it feels like the app, while staying part of the portfolio.

Don't: create a new website, repository or deployment · redesign other parts of the portfolio · use stock images or invented mock-ups · invent numbers (users, downloads, ratings).

2. Where to get the app, screenshots and logo

Everything comes from the public GitHub repository **Sam-UX-Designer/Finance-buddy**, branch `claude/laughing-hamilton-q3oseg`.

1. **Clone and run it locally:** `git clone -b claude/laughing-hamilton-q3oseg https://github.com/Sam-UX-Designer/Finance-buddy`, then `npm install` and `npm run dev:web`. This starts the API on port 4000 and the web app on port 8081, using sample data. No keys are needed.
2. **Sign in:** any 10-digit mobile number, code **123456**. Select the found accounts, tap "Approve & connect", then "Open my dashboard".
3. **Take real screenshots** (for example with Playwright): phone 390×844 at 2× and desktop 1440×900, in light and dark mode. Screens to capture are listed in section 5.
4. **Logo:** `apps/mobile/assets/images/si-avatar.png` (mascot, transparent background) and `apps/mobile/assets/images/icon.png` (app icon, mascot on white).
5. Copy the images into the portfolio's own assets folder (don't hotlink GitHub). Convert to WebP or AVIF and lazy-load below the hero.

Live demo (same app): <https://finance-buddy-theta.vercel.app>

3. What Finance Buddy is

A personal finance app for India, for **iOS, Android and the web**. Designed by Sam and built with **Claude Code**. It connects your bank accounts through India's RBI-regulated **Account Aggregator** network (consent-based, never asks for bank passwords). It brings all your money into one place, and it has **Super Intelligence**: a friendly animated mascot that answers questions from your own numbers.

4. What it does (features)

Feature	What it does
Connect safely	Sign in with your mobile number and a one-time code. Accounts connect through the Account Aggregator with your consent. No bank passwords.
The "aha" moment	Right after connecting, your net worth counts up and Super Intelligence shows three things it has already found (for example investment returns, upcoming payments, a spending jump).
Home that adapts	Swipe through bank cards; tilt the phone and the card shines; tap to flip for details. Today's spending, this month (income, spent, invested), Super Intelligence insight, investments, upcoming payments and net worth. Long-press to move or hide cards; cards that changed since your last visit move to the top.
Super Intelligence	Animated mascot assistant. Answers questions like "Why did I spend more this month?" from the app's calculation engine (numbers are computed, not guessed). Weekly brief, quick-reply suggestions after every answer, and chat history grouped by date.
Plans that fit you	Super Intelligence asks five quick questions: income, other income, everyday spending, emergency buffer and expected returns. Answers are pre-filled from bank data, so plans and forecasts use your real numbers.
Activity	Every transaction with real merchant logos. Search, filter by type, account, category, month or a custom date range on a calendar. Fix a category once and it's remembered; split a transaction.
Wealth	Net worth across mutual funds, fixed deposits, EPF, savings and money lent, with growth since January and asset allocation.
Plan	Goals with projections, a cash forecast until the next salary with a safety buffer, and monthly budgets.
Feels native	Apple-style floating glass tab bar with a sliding lens; sidebar on desktop; light and dark mode; haptics on phones; respects Reduce Motion and Reduce Transparency.
Privacy	Consent-based access, sensitive data encrypted, financial data not used to train AI models, delete your account any time.

5. How it's performing (status)

- **Working end to end:** sign-in, account connection, Home, Super Intelligence (chat, history, setup), Activity, Wealth, Plan, Notifications and Settings.
- **Live:** deployed on Vercel with a Supabase Postgres database (row-level security).
- **Tested:** 35 automated tests pass (calculation engine and API flow); a full app walkthrough runs with no errors.
- **Runs on:** iOS, Android and web from one codebase (Expo and React Native, TypeScript).
- **Honest limit:** the demo uses **sample data**. Real bank connections need a licensed Account Aggregator partner, which is designed for but not switched on.

Screens to capture for the page (every screen is on the screen chart, section 10): sign-in with mascot (dark) · “aha” reveal (light and dark) · Home (light and dark) · a bank card after swiping · Home customise mode · Super Intelligence chat answer · Super Intelligence setup questions · chat history · Activity list · Activity filter with calendar · Wealth · Plan projection · desktop Home (light and dark) · desktop Super Intelligence.

6. How we tell users (copy)

“What I Built”: third card

- **Title:** Finance Buddy
- **Description:** A personal finance app for India with a Super Intelligence that explains your money.
- **Tags:** Product design iOS Android Web AI
- **Logo:** the mascot (`si-avatar.png`), or `icon.png` on square tiles. **Link:** the new Finance Buddy page.

Landing page: sections in order

1. **Hero:** mascot (animated if possible: gentle float, blink, happy shake) + “Finance Buddy” + headline “**Your money, all in one place. Explained.**” Sub-headline: “A personal finance app for India. Connect your bank accounts safely, see everything at a glance, and ask Super Intelligence anything about your money.” Buttons: **Try the live demo** (primary) and **View the code** (secondary). Visual: Home light and dark phones.
2. **Problem (one line):** “Money in India is spread across banks, cards, mutual funds, FDs and EPF. Nobody shows you the full picture, or what to do next.”
3. **How it works (3 steps):** Connect safely → See everything at once → Ask Super Intelligence.
4. **The moment it clicks:** the “aha” reveal screenshot and one sentence.
5. **Features:** alternating text and screenshot rows (or a bento grid) for the table in section 4.
6. **Design details:** native feel, the mascot's personality, accessibility.
7. **Privacy:** 3 to 4 short trust points.
8. **How it was built:** designed by Sam, built with Claude Code; Expo / React Native, Vercel, Supabase; a tested finance engine.
9. **Closing call to action:** Try Finance Buddy · View the code.

7. How it should look

Style: plain, minimal, Apple-native. Solid surfaces, lots of whitespace. **No colourful gradient backgrounds;** the only gradient is the mascot.

Token	Light	Dark
Page background	 #F2F2F7	 #000000
Card	 #FFFFFF	 #1C1C1E
Muted surface / secondary button	 #EDEDFO	 #2C2C2E
Text / secondary text	#0A0A0B / #6B6B73	#FFFFFF / #98989F
Primary button	Black #0A0A0B, white text	White, black text
Positive · Negative · Info	 #16A34A ·  #E5484D ·  #2F6BFF	#22C55E · #F2555A · #5B8CFF
Mascot accent (sparingly)	 #14ACFD →  #353DFD →  #AB95FC →  #FE5FE7	

- **Type:** Inter 400 / 500 / 600 / 700; big bold headlines with slightly tight letter-spacing; sentence case.
- **Shapes:** cards 16 to 20px radius; buttons 14 to 16px or pill; chips pill.
- **Screenshots:** rounded (about 28px) or in a simple thin-bezel phone frame, soft shadow. No busy 3D mock-ups.
- **Motion:** gentle fade-and-rise on scroll (200 to 400ms); no motion with `prefers-reduced-motion`.
- **Dark mode:** if the portfolio has it, show dark screenshots in dark mode.

8. Content rules

- Say “Super Intelligence”, never “SI”. No jargon (AA, FIP, RLS) in visitor-facing text.
- Money in Indian format: ₹1,60,072.
- Add a small note: “Demo uses sample data. Bank and merchant logos are trademarks of their owners.”
- Responsive at 375 / 768 / 1440px; alt text on every image; contrast at least 4.5:1; one h1; page title “Finance Buddy — Personal finance app with Super Intelligence”.

9. Done when

- ☐ The third “What I Built” card says **Finance Buddy** (no “To Do List”), shows the mascot logo, and links to the new page.
- ☐ The other two cards and the rest of the site are unchanged; no new website was created.
- ☐ The Finance Buddy page has every section from section 6, uses real screenshots from the locally running app, and matches section 7.
- ☐ Works on phone, tablet and desktop; links to the live demo and GitHub work; the site builds without errors.

10. Screen chart: every screen I built

These are all the screens in Finance Buddy. Each box gives the screen's name, what it shows, and the file in this codebase (`apps/mobile/src/`). Use them from this codebase: run the app locally (section 2) and open each one to take its screenshot. Highlighted = the “aha” screen.

A. First-time flow (sign in and connect)

B. Main app: 5 tabs (bottom glass bar on phones, sidebar on desktop)

Tab layout and navigation: `app/(tabs)/_layout.tsx` , `features/Navigation.tsx`

Shared building blocks: balance cards `features/BalanceCards.tsx` · glass bars `ui/glass.tsx` · theme colours `theme/tokens.ts` · app logo files `assets/images/` .
